PROFILE

Python Developer (MCA 2026) with hands-on experience building REST APIs using Django/DRF and Flask, with PostgreSQL and Docker. Built and containerized a role-based rental platform and a full-stack security dashboard with React. Seeking a junior backend/full stack Python role in Bengaluru. Available immediately.

SKILL

- **Programming Languages:** Python, JavaScript, SQL
- **Backend Development:** Django, Django REST Framework, Flask, REST APIs.
- **Frontend Development:** React.js, HTML5, CSS3
- **Databases:** PostgreSQL, MySQL, SQLite
- **Software Engineering:** Object-Oriented Programming (OOP), API Integration, Debugging, Testing, Error Handling, Code Maintenance
- **Tools:** Git, GitHub, Postman,Docker
- **Core Competencies:** Problem-Solving, Root Cause Analysis, Performance Optimization, Documentation, and End-to-End Project Delivery

PROJECTS

HomeNest – Property Rental Management System | Django, DRF, PostgreSQL, Docker | GitHub | Live Demo

- Built a rental platform with separate Owner and Tenant roles, using role-based permissions across REST API endpoints.
- Implemented property listing, search and filters (city, type, rent), rental request approval/rejection and maintenance request tracking.
- Containerized the app with Docker Compose (Django + PostgreSQL) for a one-command setup.

Threat Intelligence Dashboard | Python, Flask, React.js, SQLite | GitHub

- Built a full-stack security analysis tool with a Flask REST API and React frontend that scans an IP or domain for open ports and known vulnerabilities.
- Implemented user authentication, a risk-scoring engine and security recommendations, presented through an interactive dashboard with charts.
- Added scan history and downloadable PDF reports.

Experience (lead with Python, not hacking)

Cyber Security & Ethical Hacking Intern | SuprMentr Technologies Pvt. Ltd. | Feb 2026 – May 2026

- Built Flask REST API features for a threat intelligence dashboard that scans IPs and domains for open ports and vulnerabilities.
- Wrote Python scripts to automate network scanning, vulnerability mapping and risk scoring.
- Generated PDF reports and visualizations from scan results.
- Tools: Nmap, Wireshark, Nessus, Burp Suite, Kali Linux

EDUCATION

- **MCA**, Srinivas Institute of Technology, Mangaluru | 2024–2026 | CGPA 7.8
- **BCA**, St. Philomena College, Puttur | 2021–2023 | CGPA 6.78
- **PUC**, St. Philomena College, Puttur | 2018–2021 | Percentage 75%
- **SSLC**, Vivekananda English Medium High School, Sullia | 2016–2018 | Percentage 76%

PROFILE

- Full Stack Generative and Agentic AI with Python – Udemy
- Machine Learning with Python – IBM
- Zero Trust Cloud Security – Zscaler
- Python Full Stack Development Internship — 10 Weeks

SOFT SKILLS

- Problem-Solving
- Independent Coding
- Analytical Thinking
- Code Debugging
- Ownership and Accountability
- Adaptability and Quick Learning
- Technical Research
- End-to-End Project Delivery
